IOS DEMO APP - ADITYA_TANNA

iOS App

The goal of this project is to create a a small iPhone application that queries Twitter for the mentions of @Peek.

Objective

- Build a small iPhone application that queries Twitter for the mentions of @Peek.
- The resulting tweets are to be displayed in a UITableView with refresh and paging support.
- The project should take 6-10 hours of coding time - remember it's a demo and not a fully featured app!

FOLLWING ARE SOME HELPFUL INFORMATION : -

- For better performance **run this demo in device**, rather then simulator.
- The device on which this demo app will be install, **must have twitter account signed in** settings app of iPhone.
- If **No Twitter account** found, It'll give an **alert**.
- This demo has built **using auto constraint** so it'll have same look and feel for any iPhone.
- **Default twitter** search is set to **Peek**. However, you can change the username in text field and get tweets from any other account as well.
- Details includes, User avatar If any, Banner image If any, and tweets If any.
- Swipe to delete is enable.

IOS DEMO APP - ADITYA_TANNA

- Pull to Refresh is also enable.
- By tapping on any specific tweet, action sheet will appear for re-tweeting the same tweet.
